

## FAQ: Argos Client DPI Scaling 6.0 and Greater

### Description:

Why is Argos Client not scaling properly?

### Examples:

### Solution:

If your machine DPI is set to greater than 100%, you may experience scaling issues. To address this issue, choose from the following options.

#### Option 1:

Change the DPI of your machine (monitor Argos is open in) to 100% under Windows Settings > Display > Scale and Layout.

#### Option 2:

Override High DPI scaling behavior for Argos client:

1. Right click on the Argos icon on the Taskbar and click "Properties" (you may need to right click "Argos Client" after the first right click before you will see Properties).
2. Navigate to the Compatibility tab, click "Override High DPI scaling behavior" and set the Scaling Behavior to "System (Enhanced)."
3. Restart Argos. You should notice improvements to the scaling.
